

MY WEBSITE:

Mapping Engineering Office Promotional Website

In the design of the website, I used CSS to ensure a user-friendly experience. The font used throughout the site is Arial, and the background color is set to #ECF0F1. I highlighted the headings with different colors and sizes to enhance the readability of the content. Project visuals are sized at 200x200 pixels and are arranged in a specific layout.

Another important feature of the website is the tables found under the "Technologies We Use" heading. These tables present the details of the software and measurement devices used by the office, allowing users to gain information while also getting an idea about the technological infrastructure. Additionally, I provided contact information at the bottom of the web page; details such as the address, phone number, and email make it easier for users to communicate with the office.

I designed this website to be used in promoting our office in real life. My goal is to enable users to obtain detailed information about our office; therefore, the content is in Turkish. I hope to further develop and enhance the project in the upcoming sections of the assignment.
